Technical & Quality Process

Technical Data Modernization & Impacts on Parts Management

**Parts Standardization & Management Committee
Conference**

November 2006

Purpose and agenda

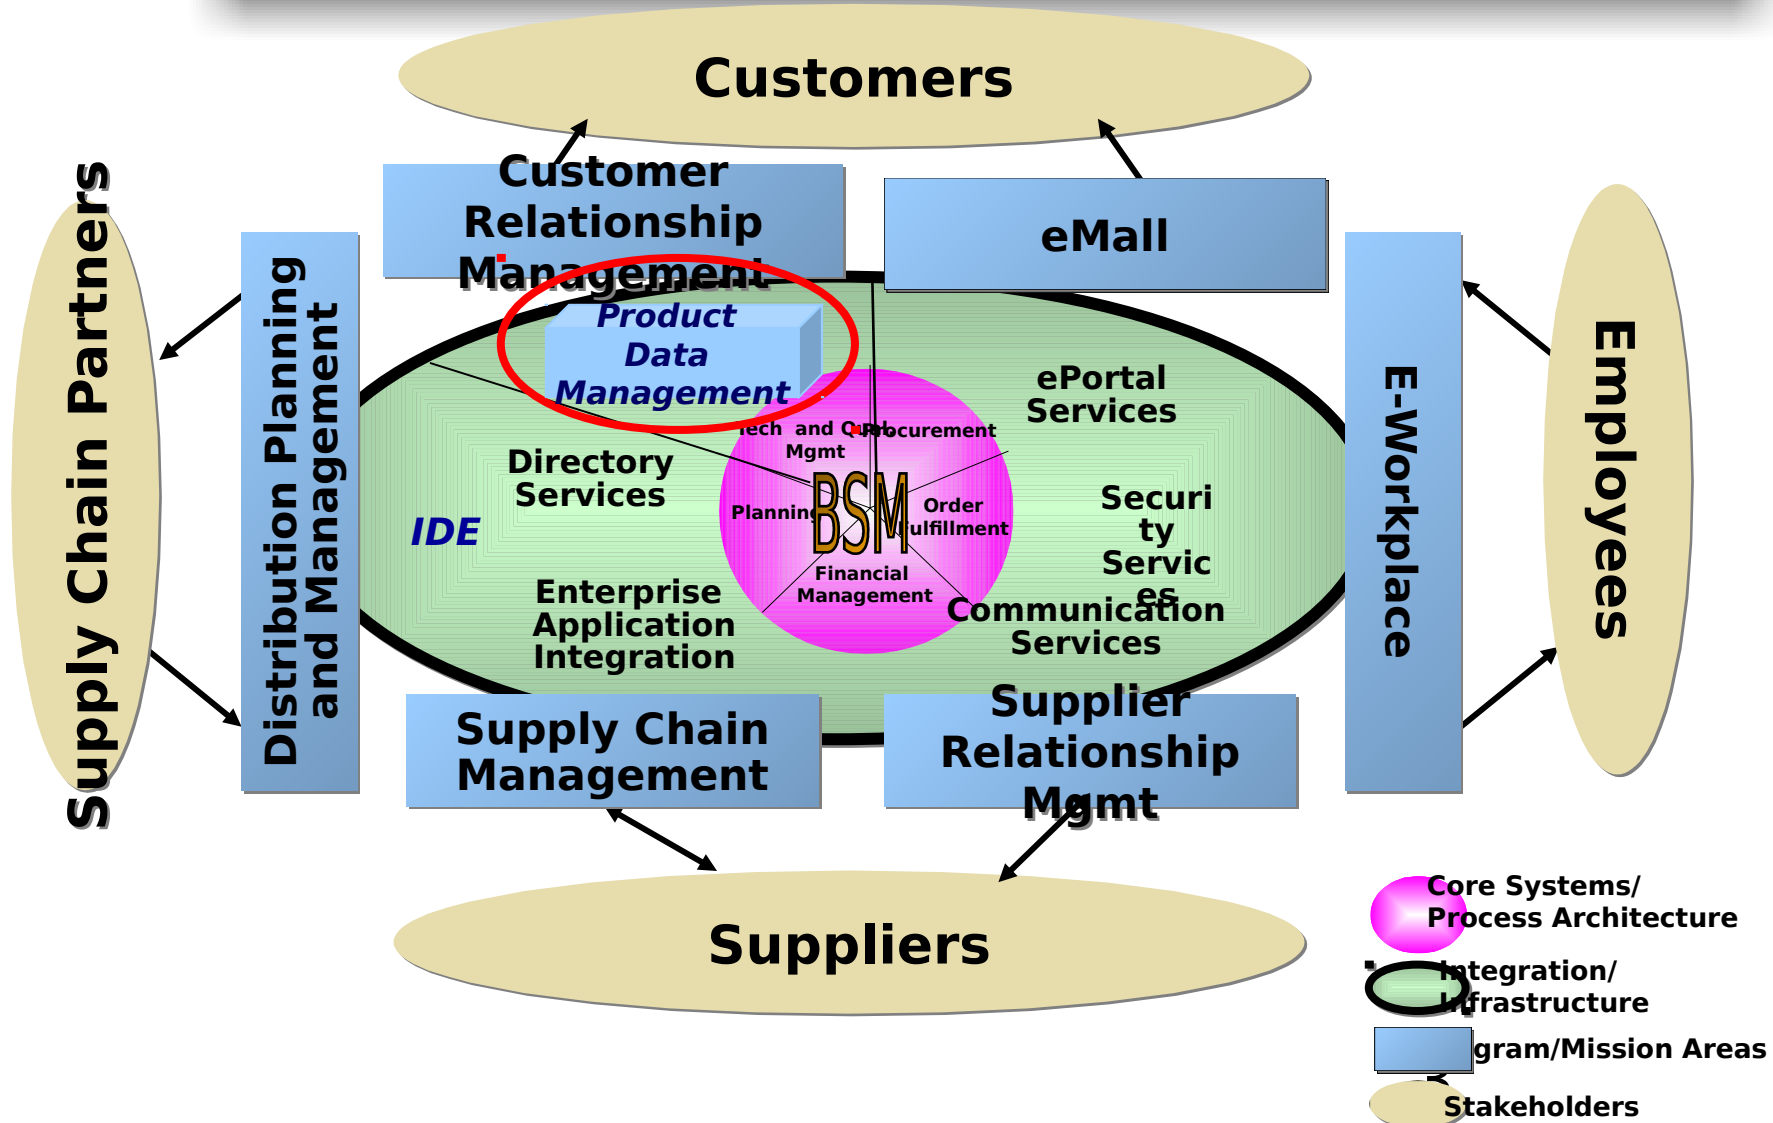

Purpose: *To update you on DLA's technical data modernization and the impact on DLA's part management efforts*

Agenda

- *What are DLA's modernization programs?*
- *What's in place now for technical data?*
- *What is the relationship to parts management?*
- *What are the next steps for DLA?*

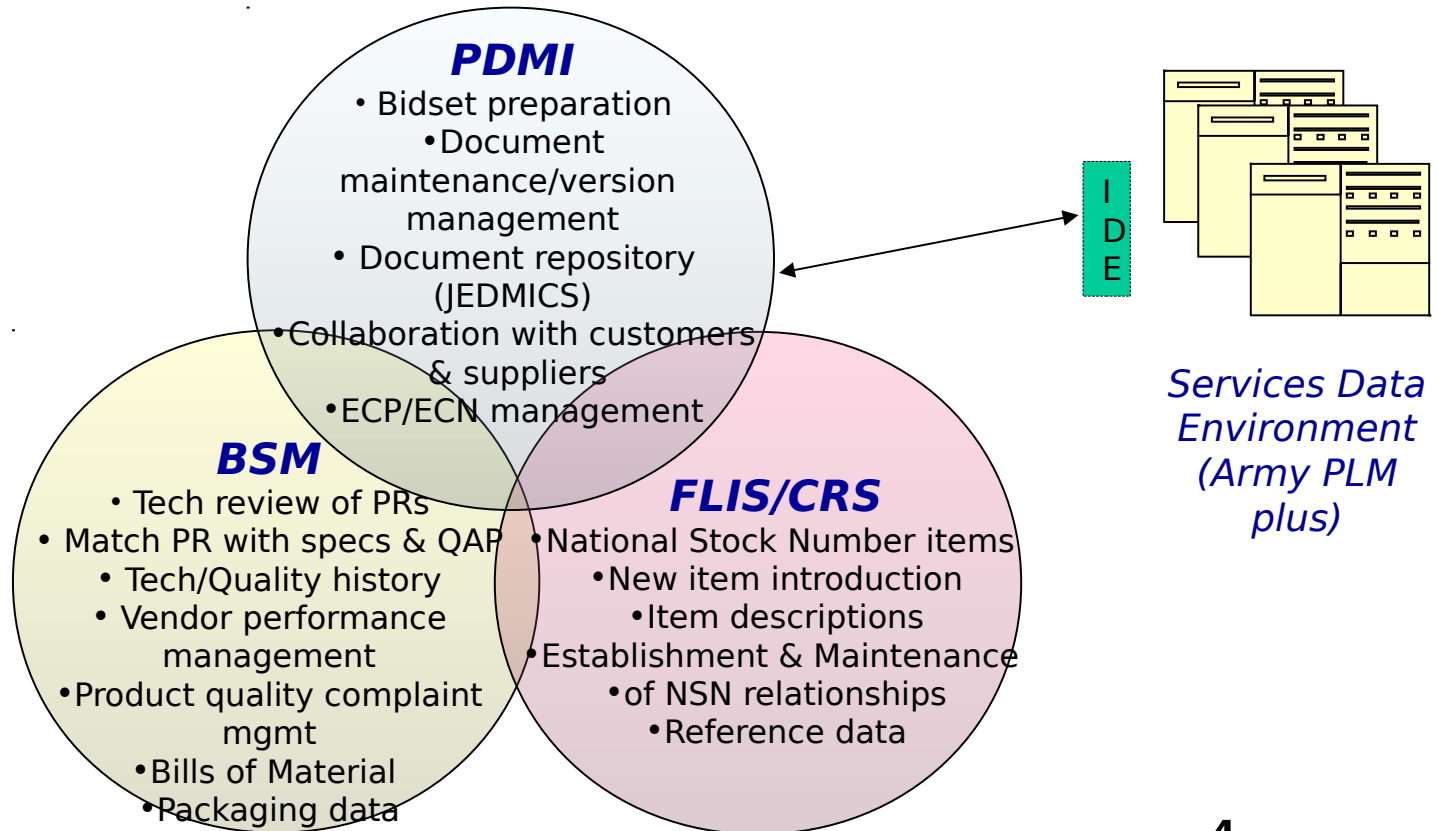

DLA Modernization - the big picture

Data modernization programs

PDMI is DLA's strategy for transforming the Agency's Technical and Quality business processes and capabilities. The Technical and Quality business process is one of the five core business processes comprising DLA's BSM strategy. The PDMI will provide part of the Technical and Quality business process solution

Why modernize tech data?

- Standardize item master data
- Link to other processes
- Consolidate DLA technical data
- Improve data accessibility & visibility
- Replace out-dated organic systems
- Link to existing DoD document databases
- Allow collaboration with Services

Take advantage of current product lifecycle management capabilities

What's in place now?

- Standard material master record in sync with the federal catalog for national stock number items
- Improved, consolidated information on manufacturer/part number buys
- Single data repository for seven DLA supply chains (aviation, land, maritime, medical, construction & equipment, subsistence, clothing & textiles)
- Data access for suppliers and customers based on rights & data privileges
- Automatic updates from ASSIST for spec items
- New business warehouse for metrics & queries

Implications for parts management *Opportunities*

- Single system for all DLA supply chains allows work to be cross site and cross supply chains
 - Flexibility for managing workload
 - Visible, standardized item information for 5 million DLA managed items
- Use of commercial SAP software throughout DLA
- More complete information on item characteristics, sales volume
- Potential for reports and templates geared to parts management projects
- Better positions DLA to link to a DoD portal for parts selection
 - DLA supply chains provide advice to users including PMOs
 - Opportunities to identify additional preferred parts

Implications for parts management *Challenges*

- DLA operational staff still learning the new system
- DLA IT sustainment staff dealing with many systemic problems and needed improvements
- Preservation of existing parts management database (MPCASS) information with close-out of our legacy material management system
 - Still used to perform parts evaluation to MIL-STD-965
 - Over 25 years of accumulated parts data

Conclusion

- DLA is struggling with significant changes and budgetary constraints.
- Consolidation of information within DLA positions us to participate in a Center of Excellence approach.
- Our business data warehouse (BW) could be a powerful tool in part management.
- Future wish list includes: reports, templates, and decision support geared to parts management.
